Medan, Sumatera Utara, Indonesia

I am an undergraduate Informatics student at Del Institute of Technology with a strong interest in Front End Development. I have experience building user interfaces for web and application projects, and I am enthusiastic about learning new technologies related to UI/UX and modern front-end frameworks. I am actively involved in various projects, adapt quickly to new tools, and enjoy collaborating in team-based environments. I am eager to further develop my skills through hands-on training and real-world development experience.

Education Level

Institut Teknologi Del - Jl. Sisingamangaraja, Sitoluama Laguboti (22381), Toba Samosir Sumatera Utara, Indonesia

Sep 2024 - Sep 2028 (Expected)

Bachelor of Informatics

Work Experiences

Apple Developer Academy @ Infinite Learning - Batam, Kepulauan Riau, Indonesia

Jun 2025 - Jul 2025

Bootcamp

Apple Developer Academy @ Infinite Learning is an official program from Apple Inc. focused on developing digital talent and future innovators in the technology sector. The program aims to equip participants with the technical and creative skills to develop applications based on the Apple ecosystem (iOS, macOS, watchOS, and iPadOS).

- Developed the "Calorizz" app, a simple iOS app that helps users calculate and monitor their daily calorie intake.
- Using Design Thinking principles to understand user problems related to diet and design user-friendly solutions.
- Design UI/UX with a focus on simple, intuitive, and informative displays using prototyping tools
- Participate in teamwork (developers, designers, and project planners) to complete projects within short time limits.

Organisational Experience

Informatics Undergraduate Student Association - Del Institute of Technology

Nov 2025 - Present

Public Relations Member

- External Communication & Networking: Build and maintain relationships with external parties, including partner organizations, sponsors, and industry professionals to support association activities.
- Media & Content Management: Manage official communication channels and create engaging content to promote association events and programs to the public.
- Event Promotion & Documentation: Coordinate promotional strategies for association events and ensure proper documentation and publication of activities.
- Stakeholder Engagement: Represent the association in external meetings, collaborations, and inter-organizational activities to strengthen the association's public image.

Informatics Undergraduate Student Association - Del Institute of Technology

Oct 2024 - Present

Member

Active member of the Informatics Undergraduate Student Association, participating in organizational activities and events that support academic and non-academic development among Informatics students. Collaborate with other members to promote teamwork, communication, and student engagement within the department.

Skills, Achievements & Other Experience

- **Hard Skills:** Java, Spring Boot, HTML, CSS, JavaScript, Swift (iOS), MySQL, PostgreSQL, Python, Git & GitHub, Data Structures & Algorithms, UI/UX Design, Website Development (Front End & Back End), Software Engineering(Agile, Scrum, CBL, OOP, MVC).
- **Soft Skills:** Problem Solving, Teamwork, Time Management, Effective Communication, Adaptability, Analytical Thinking, Critical Thinking.
- **Projects** 🏆 (2026): Developed a campus digital canteen application designed to help university students browse canteen menus, check food prices, monitor queues, pre-order meals, and receive budget-based food recommendations. Built using a Design Thinking and HCI methodology. Contributed as UI/UX Designer, responsible for wireframing and high-fidelity interface design in Figma.
- **Projects** 🏆 (2025): This project is an educational backend application developed using Java Spring Boot, focusing on building a structured web service with standard backend features. The repository includes configuration for Maven builds, automated test reports with JaCoCo, and instructions for running the server locally. It demonstrates the setup of a Spring Boot application with proper build lifecycle commands (mvn clean install, mvn spring-boot:run), integration of test coverage tools, and organized project structure for

scalability. The purpose of the project is educational, highlighting backend development practices and tooling usage in Java web applications.

- **Projects** 📁 (2025): Developed an iOS calorie tracking application using Swift, designed to help users efficiently monitor their daily calorie intake. The app integrates food recognition powered by the CoreML and Vision frameworks to detect food items through camera scanning and estimate their calorie values. It utilizes Core Data for reliable local storage of food logs and intake history, provides organized food categories and search functionality, and features a clean and intuitive user interface optimized for fast navigation and ease of use. The project includes structured UI components and supporting utilities to ensure a smooth user experience in calorie tracking. This project is a work in progress and has not yet been fully completed due to time constraints.
